What is the iTEch TDS601?

The iTEch TDS601 is a tried and tested system which has been adopted by some of the largest forklift truck manufacturers, suppliers and users in the world. It provides real-time information about the fleet, assisting logistics professionals in managing their materials handling operation more effectively. The TDS601 restricts access to authorised drivers only, drivers can log in via a manual key code (4 digits) or an RFID fob. The system communicates via Wi-Fi with a SQL-based data service and client software installed on a PC or 'virtual machine' , providing real-time information, automatically generated reports and alerts. A highly flexible daily checks system also allows your truck maintenance procedures to go paper free, with associated cost and environmental benefits for your company.

FEATURES

- Colour LCD Display
- Suitable for Gas, Diesel & Electric trucks
- Eliminates need for keys - increasing security
- Up to 1,000 drivers
- Up to 3,000 log memory - oldest entries overwritten
